PROFESSIONAL SUMMARY

Healthcare data product and analytics professional with 5+ years of experience supporting healthcare SaaS products, data validation workflows, analytics applications, and cross-functional product delivery. Skilled in SQL, Python, R, PySpark, Tableau, and healthcare data analysis, with experience translating complex data issues into clear recommendations for product, engineering, commercial, and customer-facing teams. Proven ability to lead data validation initiatives, investigate data quality issues, gather user feedback, document workflows, train teams, and recommend product and ETL enhancements. AI-fluent builder with hands-on experience using tools such as Microsoft Copilot, Claude Code, Cursor, Lovable, Databricks Genie, LangChain, Hugging Face, and LLM-enabled workflows to streamline analysis, documentation, and product development.

EXPERIENCE

Premier Inc. | Senior Analytics Developer | Data Strategy and Solutions Team (Remote) – April 2025 – Present

- Support multimillion-dollar healthcare SaaS data products by resolving internal and external user questions, gathering product feedback, and recommending ETL, data model, and product enhancements.
- Lead data validation strategy for cloud migration initiatives, including automated profiling, QC checks, issue documentation, stakeholder communication, and dashboard reporting using PySpark, SQL, and Tableau.
- Partner with product managers, engineers, commercial teams, and data stakeholders to define product requirements, prioritize enhancements, and align data solutions to customer needs.
- Investigate data quality and delivery issues across healthcare data workflows, translating technical findings into clear recommendations for downstream teams and business stakeholders.
- Train team members on ETL processes, data ingestion, data models, and validation workflows, improving operational consistency and technical best practices.

Premier Inc. | Analytics Developer | Innovations, Research and Design Team (Remote) - July 2023 – March 2025

- Partnered with product management, engineering, operations, and biostatistics teams to transition healthcare analytics prototypes into production-ready data products.
- Developed automated analytics solutions using Python, R, statistical modeling, and machine learning to accelerate healthcare research workflows from days or weeks to minutes or hours.
- Led product validation, documentation, and training for internal and external users, improving usability, adoption, and clarity across healthcare analytics tools.
- Built reusable SQL, R, and Python workflows to standardize healthcare data analysis, improve reproducibility, and reduce manual effort across research and product use cases.
- Collaborated with stakeholders to identify user needs, evaluate analytical gaps, and translate complex healthcare data concepts into practical product solutions.

Premier Inc. | Associate Analytics Developer | Innovations, Research and Design Team (Remote) - April 2022 – June 2023

- Built an open-source web application prototype for real-world evidence research that evolved into a multimillion-dollar healthcare data product.
- Designed data models, stored procedures, and external Tableau dashboards using chargemaster, EHR, EMR, and other healthcare data sources for HEOR and product analysis.
- Authored and maintained technical documentation, SQL procedures, and reusable SQL/R/Python functions to standardize presales feasibility and research analytics workflows.
- Supported end-to-end product lifecycle activities, including requirements translation, prototype development, validation, user feedback, and production handoff.

Windrose Advisors | Operations Reporting Associate (Waltham, MA) - July 2020 – March 2022

- Led data management, data visualization creation, report building and data validation, improving data quality across 50+ clients and facilitating data-driven decision making for portfolio teams.

AI PRODUCT EXPERIENCE

Founder / Builder — Munay Works | AI Product for Nonprofit Grant Intelligence – January 2026 - Present

- Building an AI-enabled SaaS platform using LLM workflows, RAG concepts, prompt engineering, and product discovery to help nonprofits identify funding opportunities and generate grant-related insights.

- Conduct pilot discovery, collect user feedback, prioritize product enhancements, and translate user workflows into application features and AI-assisted tools.

EDUCATION

Northeastern University, Boston, MA

- Master of Analytics – Concentration in Statistical Modeling and BS in Business Administration – Concentrations in Finance & Entrepreneurship

SKILLS

- **Healthcare Data & Product Operations:** Healthcare SaaS products, real-world data, EHR, EMR, HEOR analytics, data quality, data validation, data profiling, product feedback, operational workflows
- **Data Analysis & Engineering:** SQL, Python, R, PySpark, Databricks, Teradata, Prophecy, data modeling, ETL analysis, large relational databases
- **Visualization & Reporting:** Tableau, R Shiny, R Markdown, Quarto, Streamlit, dashboard development, operational reporting
- **Product & Delivery:** Data product support, stakeholder requirements, backlog prioritization, SDLC, technical documentation, user training, product validation, cross-functional collaboration
- **AI Fluency:** Copilot, Claude Code, Databricks Genie, Cursor, Lovable, LangChain, Hugging Face, Ollama, prompt engineering, AI-assisted analysis, workflow automation
- **Tools:** GitHub, Azure DevOps, Aha!, Figma, Visio
